NEUROSCIENCE
(CONCENTRATION)

Program Guidelines and Goals
Neuroscience is the interdisciplinary study of the brain and nervous system, with a scope that ranges from molecules and cells to behavior, cognition, and emotion. Denison's Neuroscience Concentration achieves this interdisciplinary perspective via courses in Biology, Computational Science, Philosophy, and Psychology. These courses are intended to complement the student's major. Students who want to pursue the Neuroscience Concentration are required to have either a primary or secondary academic advisor who is a member of the Neuroscience Faculty.

Faculty
Heather Rhodes (Biology), Neuroscience Coordinator
Faculty: Seth Chin-Parker (Psychology), Barbara Fultner (Philosophy), Jessen Havill (Computer Science), Susan Kennedy (Psychology), Eric Liebl (Biology), Nestor Matthews (Psychology), Heather Rhodes (Biology)

Neuroscience Concentration
Neuroscience Concentration requires students to complete the ten 4-credit courses listed below, and the zero-credit NEUR 401 - Neuroscience Assessment.

Four Foundational Courses
May be taken in any order, beginning as early as the first semester at Denison. Foundational courses in Biology and Psychology serve as prerequisites for the 200 and 300-level Biology and Psychology courses required of Neuroscience concentrators.

Neuroscience Senior Capstone Seminar
This course must be taken in the spring of the senior year. NEUR 412 - Neuroscience Senior Capstone Seminar The prerequisites for NEUR 412 include the advanced biology and psychology courses.

Neuroscience Assessment
Satisfactory completion of NEUR 401 - Neuroscience Assessment is required of all senior Neuroscience concentrators during the final weeks of NEUR 412 - Neuroscience Senior Capstone Seminar. NEUR 401 - Neuroscience Assessment is a zero credit course.

Courses
NEUR 299 - Introductory Topics in Neuroscience (1-4 Credit Hours)
A general category used only the evaluation of transfer credit.
NEUR 361 - Directed Study (1-4 Credit Hours)
NEUR 362 - Directed Study (1-4 Credit Hours)
NEUR 363 - Independent Study (1-4 Credit Hours)
NEUR 364 - Independent Study (1-4 Credit Hours)
NEUR 401 - Neuroscience Assessment (0 Credit Hours)
Satisfactory completion of NEUR 401 is required of all senior neuroscience concentrators. NEUR 401 is a zero credit course.

NEUR 412 - Neuroscience Senior Capstone Seminar (4 Credit Hours)
Neuroscience Senior Capstone Seminar – This course is the culminating experience for the Neuroscience concentration, taken in the spring of the senior year. Topical areas may vary but typically include perspectives from cellular & molecular neuroscience, neural systems & circuits, neural development / plasticity / repair, behavioral & cognitive neuroscience, and the neurobiology of disease. Students will read and critically evaluate primary neuroscience literature, and develop oral and writing skills for communicating neuroscience research to different audiences. Students will also integrate knowledge and skills from other courses they have taken as part of the concentration, their major, or as part of the General Education requirements. Students not completing the concentration but who have completed the prerequisites are also welcome in the course. Prerequisite(s): BIOL 334 or BIOL 349, PSYC 350, or consent of instructor.
NEUR 450 - Special Advanced Topics in Neuroscience (1-4 Credit Hours)
This course provides a venue in which to explore chosen topics in neuroscience at the advanced level. Topics vary according to the interests of students and faculty.

NEUR 499 - Advanced Topics in Neuroscience (1-4 Credit Hours)
A general category used only in the evaluation of transfer credit.

BIOL 210 - Molecular Biology and Unicellular Life (4 Credit Hours)
This course, the first of the three-course biology majors core sequence, is designed to introduce students to principles of molecular and cellular biology, with an examination of both prokaryotic and eukaryotic unicellular species. Major themes that will be covered include molecular origins of life, bioenergetics, the molecular basis of genetic expression, and cellular reproduction. Coursework will be designed to train students in the scientific method; finding, reading, and understanding scientific literature; analyzing data; and communicating scientific research in written and oral formats. A weekly laboratory period will allow students to learn cellular and molecular biology techniques and carry out independent group research projects. Three class periods and one lab session per week. Offered Fall and Spring semesters. This course satisfies the Quantitative Reasoning GE requirement.

Corequisite(s): CHEM 131 is recommended (but is not required).

BIOL 349 - Neurophysiology (4 Credit Hours)
We will use neurophysiology and neuroanatomy to understand the links between molecules, cells, systems, and ultimately behavior. The course will start with an exploration of neurons and signaling within and among cells. We will then examine some sensory and motor systems. The last portion of the course will examine the whole animal in a neurophysiological context. The classroom portion of the course consists of lectures, discussion of the text and of research articles, problem sets, analysis of case studies, and other activities. The laboratory component will involve a mixture of behavioral, anatomical, and physiological studies on vertebrate and invertebrate animals, electronic modeling of nerve circuits, and computer simulations of nerve activity. The labs are designed to introduce students to some fundamental neurophysiological techniques and to a variety of study organisms, and to strengthen experimental design and analysis skills.

Prerequisite(s): Biology Core, and CHEM 131 and CHEM 132 (or concurrently) or consent, or CHEM majors - BIOL 150 or BIOL 220, and BIOL 201 or BIOL 210, and CHEM 300 (or concurrently), or NEURO concentrators - BIOL 150 or BIOL 220, and BIOL 201 or BIOL 210, and CHEM 131 and PSYC 200.

CS 111 - Discovering Computer Science: Scientific Data and Dynamics (4 Credit Hours)
This course is an introduction to computational problem solving. Students will develop their abilities to abstract (or model) otherwise complex problems and generate elegant and efficient solutions. Students will practice these skills by developing computer programs that solve problems motivated by research in the sciences. Additional topics may include Monte Carlo methods, data analysis, population dynamics, computational biology, genetic algorithms, cellular automata, networks, data mining, and fractals. Students may earn credit for at most one of CS 109, CS 110, CS 111, and CS 112. Absolutely no prior experience is necessary.

PSYC 100 - Introduction to Psychology (4 Credit Hours)
A laboratory course that provides an introduction to the scientific study of behavior and mental processes. Topics include the biological bases of psychological processes and behavior, sensation, perception, learning, cognition, development, social processes, personality, abnormal psychology, and possibly others. The course emphasizes current knowledge and research in the field and its application. The laboratory component of this course examines the strengths and limitations of correlational, experimental, and observational research methods, and enhances understanding of course concepts and principles. Laboratory experiences include development of research questions, design of studies, data collection in classroom laboratories and field settings, data analysis and interpretation. Laboratory assignments involve written reports and demonstration of critical thinking skills about psychological concepts and scientific research. This course has a research participation (or equivalent activity). PSYC 100 is a prerequisite for all other courses in the department.

PSYC 200 - Research Methods and Statistics (4 Credit Hours)
This course examines the primary research methods and data analysis procedures used by psychologists to describe, predict, interpret and/or explain psychological phenomena and behavior. Observational, experimental, and quasi-experimental methods are studied along with principles of research design, control, validity, reliability, and ethical practice. Throughout the course, methodological procedures are considered in conjunction with principles and methods of data analysis, presentation, and interpretation. The logic and procedures of descriptive and inferential statistics are emphasized. This course prepares students to design, conduct, analyze and evaluate psychological research and is a prerequisite for all psychology research courses at the 200 and 300-level.

To promote research ethics, all PSYC 200 students must successfully complete The National Institutes of Health’s human-participant training.

Prerequisite(s): PSYC 100 or PSYC 199.

PSYC 310 - Psychology of Learning (4 Credit Hours)
An intensive survey of experimental research on fundamental emotional-cognitive processes of learning and memory, with a focus on how those processes manifest themselves in, influence, and determine behavior. The learning processes of instrumental and Pavlovian conditioning, and the interactions of those learning processes, comprise the main focus of the course. Theory, research, implications and applications pertaining to the basic principles of behavior are emphasized. The course, and learning/conditioning research traditionally, is valuable because of the use of models to understand learning about biologically and emotionally-significant experiences. Unconscious learning and seemingly irrational reactions are considered in depth. Much of the course content is relevant to applied topics such as behavior modification, substance abuse problems, anxiety, depression, other behavior disorders, education and parenting practices. This course does not cover techniques for improving academic learning skills for students.

Prerequisite(s): PSYC 100 or PSYC 199.

PSYC 311 - Research in Psychology of Learning (4 Credit Hours)
Offers the student experience conducting research in and/or out of the learning laboratory, using a variety of methods. Research requires time outside of class. Some work with live animals is usually involved. This course fulfills a Writing Competency (W) GE requirement.

Prerequisite(s): PSYC 100 or PSYC 199, PSYC 200, and one 200-level research course combination.

Corequisite(s): PSYC 310.
PSYC 330 - Cognitive Psychology (4 Credit Hours)
This course examines how people acquire, remember, and use knowledge. Topics covered include memory, attention, perception, imagery, and cognitive neuroscience. Applications to contexts such as learning and teaching, social behaviors, and individual behavior and performance will be considered.
Prerequisite(s): PSYC 100 or PSYC 199.

PSYC 331 - Research in Cognitive Psychology (4 Credit Hours)
Provides the student with research experience on problems of current interest in cognitive psychology.
Prerequisite(s): PSYC 100 or PSYC 199, PSYC 200, and one 200-level research course combination.
Corequisite(s): PSYC 330.

PSYC 340 - Sensation and Perception (4 Credit Hours)
This course explores sensory and perceptual systems. Discussions on these topics will reflect biological, ecological and evolutionary perspectives. Topics include sensitivity to light and sound; color perception; depth and form perception; perceptual illusions; music perception, and speech perception. Power and justice issues associated with sensory disabilities (e.g., blindness and deafness) will be emphasized. This course fulfills the Power and Justice (P) GE requirement.
Prerequisite(s): PSYC 100 or PSYC 199.

PSYC 341 - Research in Sensation and Perception (4 Credit Hours)
This course offers experience in conducting research on sensory processes and perception. Students are exposed to different research techniques and investigate problems relating to the various sensory modalities. This course fulfills a Writing Competency (W) GE requirement.
Prerequisite(s): PSYC 100 or PSYC 199, PSYC 200, and one 200-level research course combination.
Corequisite(s): PSYC 350.

PSYC 350 - Biological Psychology (4 Credit Hours)
This course explores the relationships between the brain and nervous system and behavior, and includes topics ranging from neuroanatomy and pharmacology of the nervous system to the biological bases of mental illness. The interactions among the nervous and endocrine systems are emphasized in an attempt to understand how basic physiological principles can serve in the understanding of complex phenomena, including emotion, learning, sleep and arousal and sexual behavior. Required for students pursuing the neuroscience concentration.
Prerequisite(s): PSYC 100 or PSYC 199.

PSYC 351 - Research in Biological Psychology (4 Credit Hours)
This course focuses on basic research methodologies and techniques that are commonly used to examine the biological bases of behavior. Students are given "hands on" experience in the design and execution of several research projects. This course fulfills a Writing Competency (W) GE requirement.
Prerequisite(s): PSYC 100 or PSYC 199, PSYC 200, and one 200-level research course combination.
Corequisite(s): PSYC 350.
